ZOMENTUM HIRING TASK

FRONTEND

**Deployed App Link** -https://chat-app-5bf59.web.app/

TechStack Used:

1. React (Frontend JavaScript Framework)

2. React Router

3. React Context API

4. Firebase (FireStore)

Main Specifications of the ChatAPP

1. The app enables us to sign In through Google.

2. We can add unlimited chat rooms inside of our app

3. **Whenever a user send a message the message automatically gets appended to the chat we are able to do this because we are using Firebase FireStore as our database (real-time database)**

4. Our own Avatar shows up on the top left corner (Display Image set on Google).
 SCREENSHOTS

The SignUp Page

Main Page of the chat window

Typing a message in the chatbox

Message gets appended to the chat
